

Easy to install and remove

Uptime solution

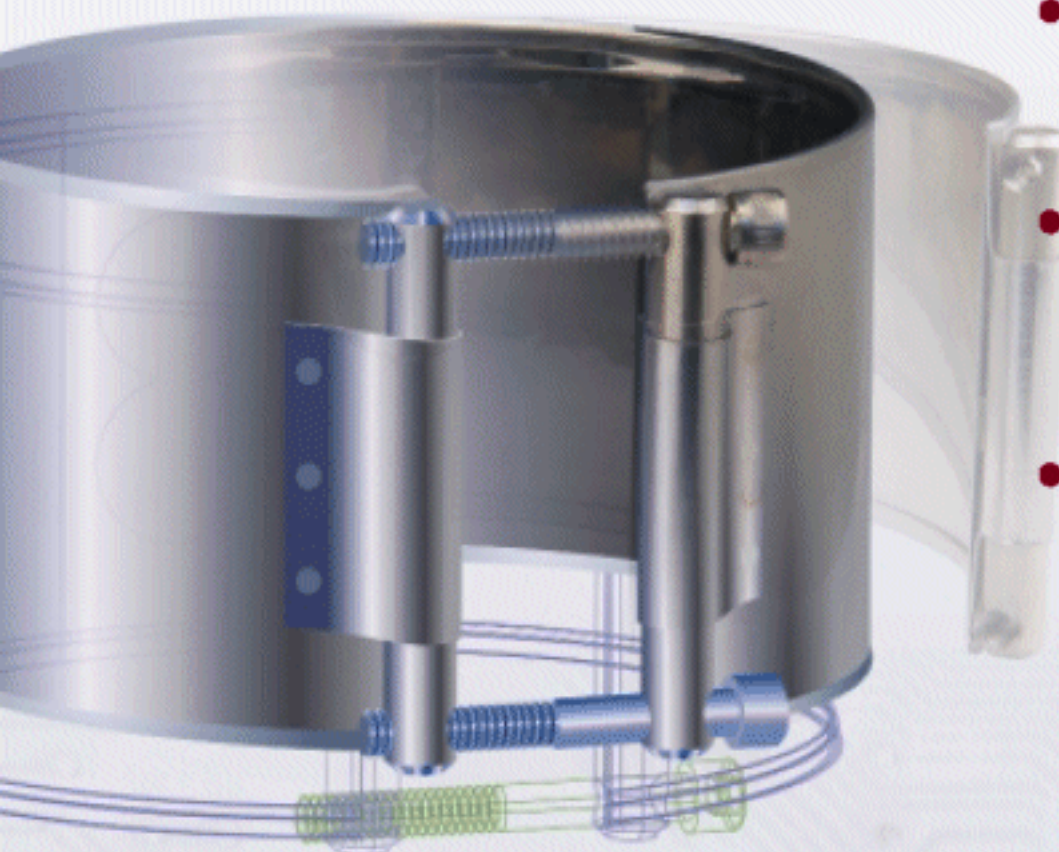

Hi-temp operation

HTFlex Band™

The HTFlex Band™ from Fast Heat combines high temperature performance with an innovative, easy to install design that sets new industry standards for band heater reliability and productivity.

The key innovation is flexibility – HTFlex Band's one-piece design is engineered to flex over the barrel diameters. Unlike conventional rigid designs, the HTFlex Band allows for installation and removal from any point along the barrel without the need to remove or even disturb other heaters and equipment mounted to the barrel. Compared to conventional two-piece bands, Fast Heat's HTFlex Band eliminates labor-intensive assembly including the wiring of multiple terminations.

Engineered to flex over the barrel diameter.

Features and Benefits

- **Flexes for easy, fast installation and removal**
Installing or removing the HTFlex Band is a one-person operation – just flex open to the diameter of the barrel, secure the self-centering screw clamps and attach power to one set of terminal screws.
- **Uptime solution**
The HTFlex Band can be installed or removed from the center of a series of band heaters or other installed equipment – since it flexes over the diameter, there's no need to remove or disturb other heaters or devices – you keep on processing.
- **Temperatures and sizes for any application**
HTFlex Band supports operating temperatures up to 1,400°F and watt densities to 90 W/in² in widths from 1-1/4" to 4" in 1/4" increments.
