We Protect Our Transducer Tips So You Can Protect Your Profits

Dynisco's new melt pressure transducers with our special DyMAX diaphragm coating – one more reason why Dynisco is always the right choice for your extrusion process. Dynisco transducers incorporate more than 50 years of Dynisco's investment in pushing the R&D envelope. Dynisco transducers last longer – as much as 3X longer than any other transducer because they use Dynisco's DyMAX coating. This unique coating adds abrasion resistance without limiting performance. In fact, it doesn't add to the thickness of Dynisco's machined, high grade stainless steel transducer diaphragm or negatively impact sensitivity. As a result you experience long life plus Dynisco's legendary high performance and accuracy.

Why buy and replace when you can buy once and enjoy extra long life. With DyMAX coating, you'll save on replacement costs, labor costs for replacing a failed transducer and seriously cut downtime.
