Eurotherm Controls – Configuring the 3200 series controller

Duration | 1 Day

Prerequisites

Audience | This course is intended for operators, engineers, and technicians who would like a more thorough understanding of the single loop series 3200 instrument configuration and operation.

Cost | \$ 350

Abstract

The course will cover installation, operation, configuration, and maintenance of the single loop 3200 series controller.

Hands-on exercises in real life applications provide practical experience.

Topics

- Controller components
- Hardware configuration
- Controller operation
- Menu structure
- Introduction to Itools configuration software
- And More!

Objective

After completing this course, participants will be able to:

- Identify configuration requirements
- Setup and commission an instrument
- Tune the control loop

Tools Provided | Student Manual

Products Covered | 3200 controllers & indicators
Itools configuration software
