

# Control Panel Design and Production

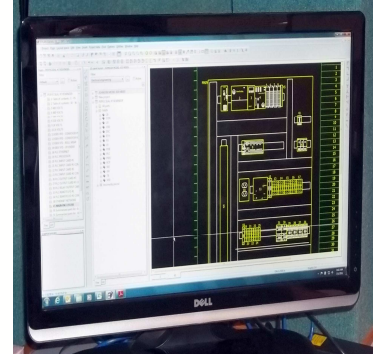

**S**ure Controls has extensive experience in control panel design, assembly and wiring. We partner with OEMs to provide solutions that enhance their production activities without the hassles of adding control panel design and/or construction to their operations.

Our highly skilled engineering staff and assemblers, along with our modern facilities, enable us to handle projects of any size. Whether we are providing design/build services or are building to your specifications, we complete the job in a professional manner that will meet or exceed your expectations.

We work closely with our OEM partners to assure the panel solutions we produce integrate with your products, while meeting compatibility, safety, performance and requirements. Plus, our clean, efficient layouts make troubleshooting and repair easier.

- All components used in our panels are readily available and easily replaced to help keep maintenance costs low.
- Our control panels provide functionality and design that reduce energy and operational costs and ensure equipment operates at peak performance.
- Every control panel is designed to meet or exceed compliance and safety standards.
  - Compliance with OSHA standards to enhance operator and equipment safety
  - UL, CSA or CE compliant panel construction is available to meet your specific safety requirements.
- Every panel goes through comprehensive testing before delivery to assure expected quality and performance standards.

Once the control panels are complete, we can complete field installation of panels if you choose. We can also train your customers to troubleshoot or repair panels or if they lack resources, we can make repairs for them.
