

Capture the Data You Need to Make Profitable Decisions

Plant Intelligence Systems empower your organization to work smarter, not harder. Immediate access to information that will better inform decision making, avoid waste and downtime, improve machine utilization and enhance overall plant efficiency.

Sure Controls can help you collect and share crucial plant metrics with all the right people in real time. Utilizing tools such as HMI/SCADA systems and the Web, we can capture key data across your entire manufacturing process and integrate it into one easy to use, comprehensive dashboard.

Our experts can save you time and money whether we are building and installing a new system or integrating operational data from your existing manufacturing process. We specialize in normalizing and integrating data from plant and business systems with differing standards and protocols allowing your staff to focus on decision making not IT challenges.

Centralized and contextualized data to improve Operational Excellence.

Asset Utilization

- Uptime/downtime-OEE
- Capacity planning
- Real-time performance feedback

Cost Take Out

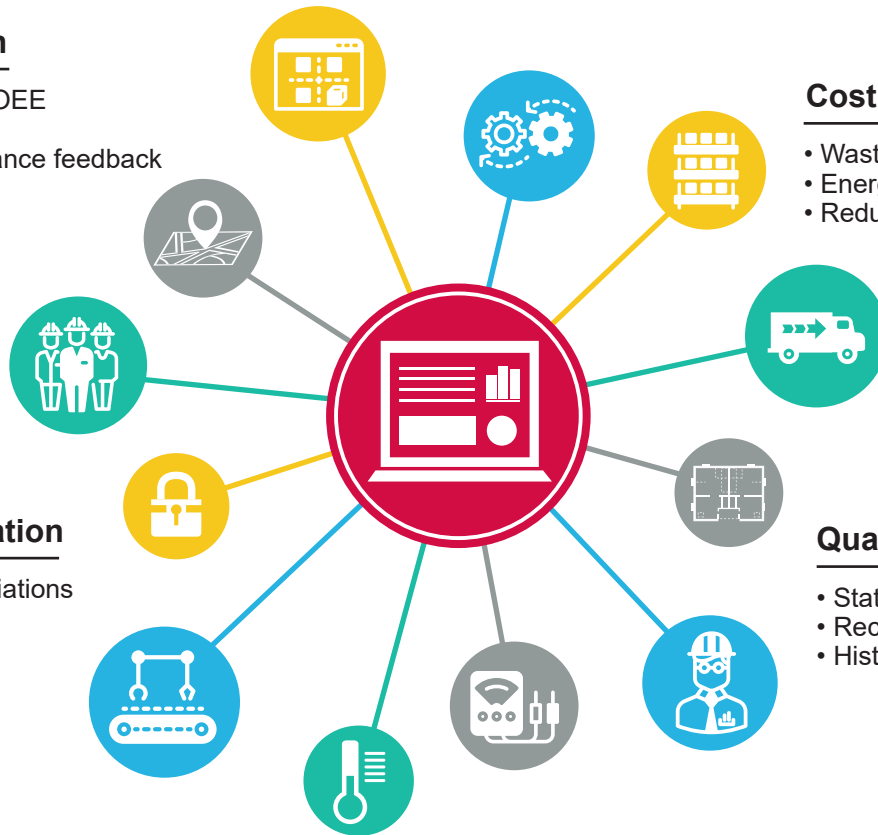

- Waste tracking and reduction
- Energy utilization
- Reduce work-in-process

Process Optimization

- Reduce process deviations
- Process alarming
- Exception reporting

Quality Assurance

- Statistical process control
- Recipe/standards management
- History/Genealogy
