

SURE MOTION

SMART ROBOTICS AND MICRO-AUTOMATION SOLUTIONS

Micro-Automation is automating a manufacturing process that involves the handling of small parts. A small part is defined differently for each customer, but for Sure Controls, it ranges anywhere from 6" (150mm) down to .2" (5mm).

Collaborative

- Address labor shortage
- Deploy quickly
- Faster ROI
- Redeployable – use for a number of tasks

Micro-Automation

- Small footprint
- Quick changeover
- Redeployable automation

Addressing Complex Industry Issues

There are many factors to take into consideration when approaching system automation. These may include product in-feed, product out-feed, cycle rate, and quality inspection. Applications that involve handling small parts introduce an additional level of complexity due to challenges in handling the parts on the in-feed side.

Part Specific Bowl Feeders

Issues can occur during changeover because each bowl feeder is typically designed for a specific part which leads to a high investment that can't be easily re-purposed.

Delicate Materials

Feeding small delicate materials into the automation cell can be difficult.

Jamming

The smaller the part, the more prone it typically is to jamming.

Expert Integration

Expert Solutions

- Improve automation cell
- Minimize footprint
- Integrated flexible part feeders
- Automate at lower volumes

Effective Automation

Quicker ROI

- Address labor shortage
- Expert robotic integration designers
- Redeployability

SMALL PART AUTOMATION SOLUTIONS

Quick ROI

- Lower investment
- Quickly deployed
- Added flexibility
- Fast change-over

Added Flexibility

- One of our customers is currently running 1000+ part numbers on the same cell

Quick Changeover

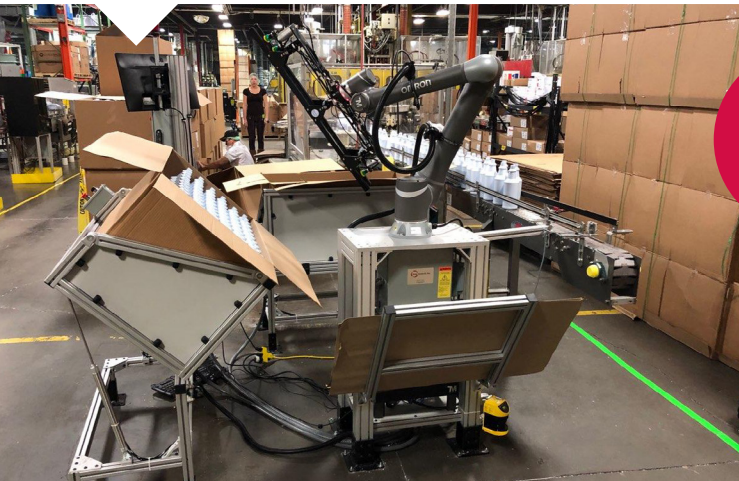

- Custom trays can be designed for nesting of parts with changeover in minutes vs. hours

Innovative

- Vision guided picking
- Spring detangler

Reduced Manufacturing Real Estate

- On average, automation can reduce current footprint by 30-50%

A team of experts that understand system automation address — product in-feed / out-feed, cycle rate, and quality inspection.

At Sure Controls we are Robotics experts, we will give you a fully integrated solution that solves your issue, whether it be the infeed, or a labor shortage. We design our solutions so that every hand-off is seamless. We fully understand that it isn't just about the robot, but the whole process and your whole business.
